Introduction to Project R.A.W:

- Our project is about R.A.W database management system. It is basically a
 desktop-based software system which is helping to provide freelancing services.
- As we recently started the project work, it is an ongoing event.
- ➡ Simple Intro of the Database System of the R.A.W:
- There are 3 types of users for this project.
 - 1. Buyer,
 - 2. Seller &
 - 3. Admin

Since:2020

- Buyer, Seller and Admin information is highly secured with their "Security Password" and "Unique Username".
- In this software, a buyer can post a job and multiple sellers can request for that job willingly. This is the starting of the whole process.
- R.A.W management system also has a well-planned and organized account managing system. So, the transfer of the money from buyer account to seller account and deduction of admin percentage is clearly visible.
- Last of all it is basically a well-planned and organized software system and the moto of the R.A.W management system is: Your security, Our Priority.

Case Study:

In this RAW project, there are basically 3 types of user and they are:

i) Buyer ii) Seller & iii) Admin.

In this management system, an Admin is operating the whole system. So, at first, we are characterizing the *Admin* by ("NAME", "MAIL", "PASS", "NATIONAL ID", "NATIONALITY", "PASSPORT NO", "DESCRIPTION", "ACCOUNT NO").

A **Buyer** can be defined by ("BUYER USER NAME", "ACCOUNT NUMBER", "E-MAIL", "PASSWORD", "BUYER FULL NAME", "DATE OF BIRTH", "GENDER", "NATIONAL ID NO", "NATIONALITY", "PASSPORT NO", "CONTACT NO", "DESCRIPTION", "ACTIVE STATUS", "BIODATA", "ACCOUNT CREATE HISTORY", "BUYER RATING", "PUBLICITY").

A **Seller** can be defined by ("SELLER USER NAME", "ACCOUNT NUMBER", "E-MAIL", "PASSWORD", "SELLER FULL NAME", "DATE OF BIRTH", "GENDER", "NATIONAL ID NO", "NATIONALITY", "PASSPORT NO", "CONTACT NO", "SKILLS", "DESCRIPTION", "ACTIVE STATUS", "BIODATA", "ACCOUNT CREATE HISTORY", "SELLER RATING", "PUBLICITY").

A **Buyer** will **Post A Job** and the job will be defined by ("PROJECT ID", "BUYER USER NAME", "PROJECT NAME", "BASE TOPIC", "RELATED SKILLS", "DESCRIPTION", "ESTIMATED TIME", "HISTORY", "JOB STATUS", "JOB PRICE"). Multiple **Sellers** can request for the job and only one will get the job which will be accepted by the **Buyer**.

The *Requested Jobs* will be defined by ("PROJECT ID", "SELLER USER NAME", "BUYER USER NAME", "BASE TOPIC", "PROJECT NAME", "RELATED SKILLS", "DESCRIPTION", "HISTORY", "DEADLINE", "REQUEST STATUS", "JOB PRICE"). The remaining process will be terminated if the *Buyer* don't accept the request that coming from the *Seller*.

But if the **Buyer** accepts the request then **Accepted Jobs** will be characterized by ("PROJECT ID", "SELLER USER NAME", "BUYER USER NAME", "BASE TOPIC", "PROJECT NAME", "RELATED SKILLS", "DESCRIPTION", "HISTORY", "DEADLINE", "ACCEPT STATUS", "JOB PRICE") and the status of those jobs will be defined as "**Pending**". If the Job is not accepted by the **Buyer**, then that job will be again available for the other **Sellers**.

Then the **Sellers** who got the jobs they can submit the job through a submission link and this will be considered as **Submitted Work** which will be characterized by ("PROJECT ID", "SELLER USER NAME", "BUYER USER NAME", "PROJECT NAME", "BASE TOPIC", "SUBMIT LINK", "HISTORY", "DEADLINE", "SUBMIT STATUS", "ACCEPT STATUS", "JOB PRICE").

If the job is holding all the requirements then a **Buyer** will accept the work and then the transaction of money will begin. If the job is not proper then the **Buyer** will decline the work to be accepted. If it is acceptable then **Accepted Work** will be identified by ("PROJECT ID", "SELLER USER NAME", "BUYER USER NAME", "PROJECT NAME", "BASE TOPIC", "SUBMIT LINK", "HISTORY", "DUE TIME", "BUYER ACCOUNT NUMBER", "TRANSACTION ID", "JOB PRICE").

After submitting a project or job there will be opening 3 sections. They are:

- 1. Admin Account,
- 2. Buyer Account &
- 3. Seller Account.

Since:2020

Admin Account will be defined by ("ACCOUNT NUMBER", "TRANSACTION ID", "SELLER USER NAME", "BUYER USER NAME", "HISTORY", "BUYER TO SELLER TRANSFER MONEY", "ADMIN RECEIVED", "CURRENT AMOUNT", "WITHDRAW", "DEPOSIT", "CURRENT AMOUNT").

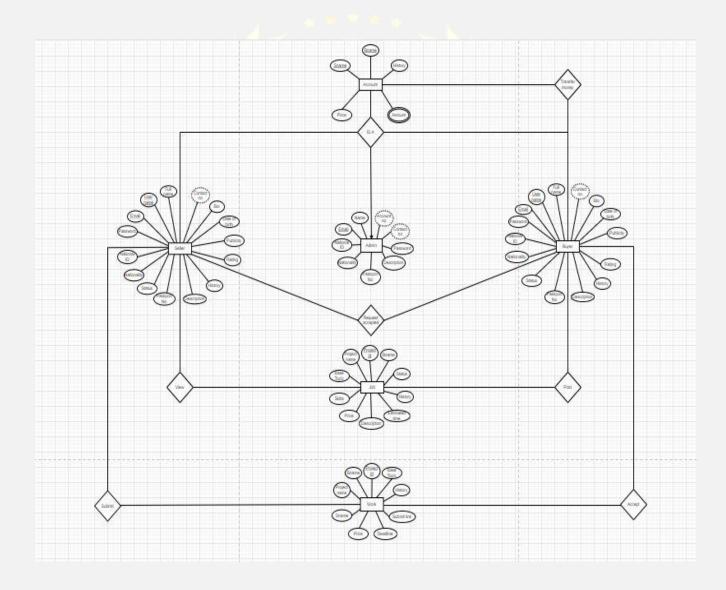

Buyer Account will be identified by ("BUYER USER NAME", "ACCOUNT NUMBER", "TRANSACTION ID", "SELLER USER NAME", "HISTORY", "BUYER TO SELLER TRANSFER MONEY", "SEND BONUS", "TOTAL SEND AMOUNT", "CURRENT AMOUNT", "DEPOSIT", "WITHDRAW", "CURRENT AMOUNT").

A Seller Account is identifiable by ("SELLER USER NAME", "SELLER ACCOUNT NUMBER", "TRANSACTION ID", "BUYER USER NAME", "HISTORY", "BUYER TO SELLER TRANSFER MONEY", "SELLER RECEIVED", "GET BONUS", "TOTAL RECEIVED AMOUNT", "CURRENT AMOUNT", "DEPOSIT", "WITHDRAW", "CURRENT AMOUNT");

Conclusion:

At last, this one was a part of our project named "R.A.W-DATABASE MANAGEMENT SYSTEM". We tried to make a genuine database management system. As it is an ongoing project it should be updated day by day.

Thanks, from the 'TEAM DELTA'.
